

A high-angle photograph of a young child with dark hair, smiling broadly while taking a bubble bath. The child is surrounded by white foam. A yellow and green toy duck is visible in the upper left corner of the frame.

PROPANE WATER HEATERS: MAKING HOUSES INTO HOMES

Your new home deserves the best. Propane water heaters bring the ultimate comfort to your family with abundant hot water — plus lower energy costs and reduced emissions.

SAVE MORE

Did you know that a 40-gallon propane storage tank unit delivers the same amount of hot water as a 50-gallon electric model? Propane water heaters produce the hot water that keeps your family comfortable without using as much energy as electricity. In fact, a tankless propane unit saves more than \$150/year compared with an electric storage tank model. Who doesn't love lower energy bills?

CUT HARMFUL EMISSIONS

The truth is, electricity creates 35-60 percent more CO₂ emissions than propane. That's because a significant amount of electricity comes from coal-fired power plants. Propane water heaters are a greener option for your home, with 46 percent fewer greenhouse gas emissions than electric water heaters.

MEET FEDERAL STANDARDS

2015 federal efficiency standards caused all new storage tank water heaters to increase in size. By choosing a propane tankless water heater, you can save on valuable floor space — anywhere from 9 to 16 feet — and deliver an endless supply of hot water on demand.

TYPES OF PROPANE WATER HEATERS

Storage Tank Water Heaters

Propane storage tank water heaters offer superior hot water delivery and energy costs compared with traditional electric storage tank units, and come in a wide range of capacities to meet the hot water demands in any home.

Tankless Water Heaters

These systems eliminate "standby losses" which occur in systems with storage tanks — like the typical electric water heater. Tankless models heat water only when it's needed, for hot water on demand.
